ANALYTIC SUBJECT INDEX TO VOLUME 40

References marked (A) are to abstracts of papers presented at meetings of the Physical Society, those marked with (L) are to Letters to the Editor.

Absorption of light (see also **Spectra, absorption**)
In ultraviolet by celluloid, H. M. O'Bryan—123 (A)
Shift of the transmission band of Ag by cold working, H. Margenau—800

Accommodation coefficient
Of H_2, K. Blodgett, I. Langmuir -78
Monatomic gases and solid surfaces, C. Zener—335, 1016(L); W. C. Michels—472(L)

Acoustics
Sound velocity in relative mixtures, D. G. C. Luck—125(A); 440
Theory of Chladni plates, R. C. Colwell—125(A); 1026(A)
Theory of filtration in solid rods, R. B. Lindsay, F. E. White—125(A)
Ultrasonic absorption in gases, J. C. Hubbard—1026(A)

Aerodynamics (see also **Hydrodynamics**)
Characteristics of symmetrical hydrofoils, R. C. Darnell—1027(A)

Alloys
Orientations forming in Ag-Cu during precipitation, C. S. Barrett, H. F. Kaiser—1035(A)
Plastic workings of Mg-alloys, L. G. Morell, J. D Hanawalt—1035(A)

Arcs (see also **Discharge of electricity in gases**)
Discharge not obtained in pure A, G. E. Doan, J. Myer—36
Electron emission by metastable atoms, E. W. Pike—314(L)
Electron temperatures and concentration of excited atoms in a Cs arc, F. L. Mohler—1042(A)
Intermediate free path case in the theory of a plasma, L. Tonks—1046(A)
Probe measurements, R. C. Mason—1045(A)
Radiation from metals bombarded by slow electrons, C. Boeckner—1043(A)
Secondary emission from the cathode, W. Jackson—1043(A)

Atomic and molecular beams
Double Stern-Gerlach experiment, N. Rosen, C. Zener—502; 1036(A)
Reflection of atoms from crystals, C. Zener—126 (A); 178
Reflection of Hg atoms from lithium floride crystals, R. R. Hancox, A. Ellett—1049(A)
Reflection of rare gases from alkali halide crystals, R. M. Zable—1049(A)
Reflection of Tl, Sb, and Pb from a NaCl crystal, J. M. B. Kellogg—1049(A)

Atomic structure (see **Energy states of atoms; Spectra**)

Atomization
Mechanism accompanying solid injection, R. A. Castleman, Jr.—1025(A)

Atmosphere (see **Meterology**)

Atmospheric electricity (see also **Geophysics; Aurora; Meteorology**)
Ionization of the upper atmosphere, E. O. Hulburt—129(A)
Lightning discharges and the electrical field of thunderstorms, J. C. Jensen—1013(L)

Biophysics
Comparison of effects produced by x-rays and gamma-rays, G. Failla—1033(A)
Crystal structure of insulin, G. L. Clark, K. E. Corrigan—639(L)
Dispersion of small liquid systems, N. Rashevsky—132(A)
Reduction by x-rays of aqueous solutions and influence of organic substances, H. Fricke, M. Washburn—1033(A)
Size of gene, energy of mutation, O. Blackwood—1034(A)
Surface forces of the sea urchin egg, K. S. Cole—131(A)
Theoretical physics and cell physiology, N. Rashevsky—133(A)

Book Reviews
Angerer, E. V. Wissenschaftliche Photographie. Eine Einfuehrung in Theorie und Praxis—117
Auerbach, F. and W. Hort. Handbuch der Physikalischen und Technischen Mechanik—887
Berthoud, A. Matiere et Atomes. Second Edition—321
Boutaric, A. Les Colloides et L'Etat Colloidal—475

Book Reviews (continued)

Bruhat, Georges. Le Soleil—642

Fraser, G. J. Molecular Rays—322

Gmelins Handbuch der Anorganischen Chemie. Eighth Edition. System-Nummer 7: Brom.—117

Hobson, E. W. The Theory of Spherical and Ellipsoidal Harmonics—322

Newton, Sir Isaac. Opticks: Or, a Treatise of the Reflections, Refractions, Inflections and Colours of Light—474

Ostwald, W. Kolloidwissenschaft, Elektrotechnik und Heterogene Katalyse—642

Person, Fred G. General Physics for Home Economics Students—322

Rakshit, J. N. Association Theory of Solution and Inadequacy of Dissociation Theory—475

Saha, M. N. and B. N. Srivastava. A Text Book of Heat—888

Shorter, L. R. Introduction to Vector Analysis—474

Simon, H. and R. Suhrmann. Lichtelektrische Zellen und Ihre Anwendung—641

Spinney, L. B. A Text Book of Physics—474

Stark, J. Atomstrukturelle Grundlagen der Stickstoffehemie—321

Stark, J. Fortschritte und Probleme der Atom Forschung—321

Veroffentlichungen den Wissenschaftlichen Zentral Laboratoriums der Photographischen Abteilung AGFA. Band II—117

Weizel, W. Bandenspektren. Band I. Handbuch der Experimentalphysik Erg.—642

Broadening of spectral lines

Imprisonment of resonance radiation, C. Kenty—633(L)

And pressure shift, H. Margenau—387; 1036(A)

Capillary action (see also Surface tension)

At low pressures, F. W. Constant—1027(A)

Chemical reactions

Disappearance of H_2 in the presence of K or Li ion sources, C. H. Kunsman, R. A. Nelson—128(A); 936

Reaction rate from sound velocity measurements, D. G. C. Luck—125(A); 440

Cold emission (see **Discharge of electricity in high vacua; Thermionic emission; High voltage tubes; and Machines**)

Collisions of second kind

Involving ionization and excitation, K. B. Thomson, O. S. Duffendack—1042(A)

Collision phenomena

And double Stern-Gerlach experiment, N. Rosen, C. Zener—502; 1036(A)

Theory of inelastic collisions, E. C. G. Stueckelberg—1036(A)

Colloids

Dielectric behavior, J. B. Miles, Jr., H. P. Robertson—583

Combustion

Temperature measurements on an internal combustion engine, A. E. Hershey, R. F. Paton—1053(A)

Compton effect (see **X-rays, diffraction, scattering etc.**)

Constants, physical

Probable values of e, h, e/m and α, R. T. Birge—228; 319(L)

Cosmic radiation

Analysis of observations, L. D. Weld—713

Coincidence of two G. M. counters, J. C. Street, T. H. Johnson—1048(A)

Dependence of ionization produced upon pressure and temperature, J. W. Broxon—1022(L)

Detection of individual rays, W. F. G. Swann, J. C. Street—1049(A)

Energies and nature of rays, R. A. Millikan, C. D. Anderson—1056(A)

Cosmic radiation (continued)

Factors influencing ionization, J. C. Stearns, W. Overback—636(L)

Loss of energy by fast electric particles, E. J. Williams—881(L)

Multiple secondaries in Pb, T. H. Johnson, J. C. Street—638(L)

Nature of the secondary radiation, T. H. Johnson—468(L)

Photographing tracks of corpuscular rays, T. H. Johnson, W. Fleischer, Jr., J. C. Street—1048(A)

Photon and neutron hypotheses, R. A. Millikan, C. D. Anderson—325

Wall effects in ionization electroscopes, E. J. Workman—1055(A)

Crystals and crystal structure

Atomic arrangement and the number of valence electrons, W. H. Zachariasen—914

Bi crystals grown within and outside a magnetic field, A. Goetz, R. C. Hergenrother—137

Calculated and observed grating constants, Yuching Tu—662

Crystals and crystal structure (continued)
Cold working of Ag, H. Margenau—800
Deposition upon monocrystalline hemispheres of Zn, P. A. Anderson—596
Forms of Te, P. I. Wold—128(A)
Of GeS, W. H. Zachariasen—917
Graphical projection method, D. McLachlan—1030(A)
Of insulin, G. L. Clark, K. E. Corrigan—639(L)
Of $K_2S_2O_8$, W. H. Zachariasen—113(L); 923
Lattice energy constants, R. H. Canfield—1034(A)
Lorentz double refraction, F. Seitz—1036(A)
Minerals of the sodalite family, T. F. W. Barth—1034(A)
Molecular rotation in solid state, F. C. Kracek T. F. W. Barth, C. J. Ksanda—1034(A)
Molecular structure of ice and water, E. L. Kinsey, O. L. Sponslor—1035(A)
Mosaic structure in Co, F. Bitter—125(A)
Mosaic structure of calcite, S. K. Allison—1032(A)
Orientations forming in Ag-Cu during precipitation, C. S. Barrett, H. F. Kaiser—1035(A)
Plastic workings of Mg-alloys, L. G. Morell, J. D. Hanawalt—1035(A)
Secondary and mosaic structure, F. Zwicky—63
Thermal expansion of Bi single crystals, A. Goetz, R. C. Hergenrother—643

Critical potentials (see **Potentials, critical**)

Dielectric constants
Of dichlorethane, dibromethane, chlorobromethane, and diacetyl; free rotation, C. T. Zahn—291
Polar characteristics of insulating oils, W.N. Stoops—1054(A)
Statistical calculation, O. Halpern—134(A)

Dielectrics and dielectric properties
Behavior of colloidal particles with an electric double-layer, J. B. Miles, Jr., H. P. Robertson—583
Losses in insulating materials, H. H. Race—124(A)
Losses in rocksalt, P. L. Bayley—120(A)

Diffraction of atoms (see **Atomic and molecular beams**)

Diffraction of electrons (see **Electrons, diffraction**)

Diffusion
Mobility of Cs atoms adsorbed on W, I. Langmuir, J. B. Taylor—463(L)
Technique for the separation of the isotopes of hydrogen, R. M. Langer—1047(A)

Dimensions and dimensional analysis
Proposal to abolish the absolute electrical dimension systems, E. Weber—1056(A)

Discharge of electricity in gases (see also **Arcs; Electrons in gases; Electrodeless discharge**)
Dark current time in condensed discharges, L. B. Snoddy—409
Disappearance of gas in discharge tubes, A. W. Hull, E. E. Burger—1044(A)
Discharge characterized by electron emission from the walls, I. Langmuir, C. G. Found—129(A)
Energy distribution in positive column, F. L. Mohler—122(A)
Intermediate free path case in the theory of a plasma, L. Tonks—1046(A)
Propagation of luminosity in discharge tubes, J. W. Beams, M. Podtiaguine—129(A)

Discharge of electricity in high vacua (see also **Thermionic emission; High voltage tubes and Machines**)
Effect of the target on breakdown, W. H. Bennett—416; 1043(A)

Dispersion
Of celluloid between 300A and 1000A, H. M. O'Bryan—123(A)
Of oxygen in the ultraviolet, R. Ladenburg, G. Wolfsohn—123(A)

Dissociation
Heat of Na_2 from magnetic rotation spectrum, F. W. Loomis, R. E. Nusbaum—380
Of the carboxyl group in amino acids, G. A. Anslow—115(L); 639(L)

Dynamics
Motion of Chladni plates, R. C. Colwell—125(A), 1026(A)

Effervescence
Mechanics of effervescence, O. Stuhlman, Jr.—1026(A)

Elasticity
Secondary structure of crystals, F. Zwicky—63

Electrical conductivity and resistance
Of liquid Hg at high temperatures and pressures, F. Birch—1054(A)
Nature of electrical contact between metals, T. H. Osgood, E. Hutchisson—129(A)
Of silicon carbide, R. W. Sears, J. A. Becker—1055(A)

Electrical circuits
Network equivalent of a piezoelectric resonator, K. S. Van Dyke—1026(A)
Principles of a new portable electrometer, R. Gunn—307, 1031(A)

Electrodeless discharge
Electrostatic and magnetic components in the discharge, C. T. Knipp, V. M. Smith—1046(A)

Electromagnetic theory
Torque on magnet carrying current, J. Zeleny, L. Page—299

Electrons
Dirac electron in simple fields, M. S. Plesset—1030(A)

Electron diffraction
Angular distribution of electrons scattered in Hg vapor, J. T. Tate, R. R. Palmer—731; 1042(A)
By a Au crystal, H. E. Farnsworth—1049(A)
By metal surfaces, C. J. Davisson, L. H. Germer—124(A)
By single crystals of Cu and Ag, H. E. Farnsworth—684

Electrons in metals
Thermal agitation, N. H. Williams, E. W. Thatcher—121(A)

Electrons, secondary
As a function of primary energy, P. L. Copeland—122(A)
Influence of the electrical discharge on the secondary emission, W. J. Jackson—1043(A)
From Ni when bombarded by positive Li ions, W. S. Stein—425

Electron tubes (see **Discharge of electricity in high vacua; Vacuum tubes**)

Electro-optical effects (see also **Photoelectric effect and properties**)
Kerr effect and molecular field in Rochelle salt, H. Müller—1051(A)
Variation in the Kerr constant of nitrobenzene with temperature, H. Trotter, Jr.—1052(A)

Electrostatics
Potential distributions in cylindrical disks with penetrating electrodes, M. Muskat—1055(A)

e/m
Probable values of e, h, e/m and α, R. T. Birge—228; 319(L)
From x-ray dispersion measurements, E. Bäcklin—112(L), J. A. Bearden—471(L)

Elements
Positive ions of mass 220, L. L. Barnes, R. C. Gibbs—318(L)

Energy states of atoms (see also **Atomic structure; Spectra, atomic**)
Configurations involving almost closed shells, G. H. Shortley—1030(A)
Lower limit for the ground state of He atom, D. H. Weinstein—797
Theory of the atom of energy, E. K. Plyler—1029(A)

Entropy
Of N_2O and CO_2, W. H. Rodebush—113(L)

Equations of state
Of a nonideal Einstein-Bose or Fermi-Dirac gas, G. E. Uhlenbeck, L. Gropper—1029(A)

Errata
Dissociation of the carboxyl group in amino acids, G. A. Anslow—639(L)
Inelastic and elastic electron scattering in A, A. L. Hughes, J. H. McMillen—469(L)

Evaporation
Of Cs atoms adsorbed on W, I. Langmuir, J. B. Taylor—463(L)
And migration of Th on W, W. H. Brattain—1044(A)
Surface energy and heat of vaporation, L. S. Kassel, M. Muskat—131(A); 627

Excitation of atoms and molecules
Concentration of excited atoms in a Cs arc, F. L. Mohler—1042(A)
Mean lives of Hg lines λ2537 and λ1849, Paul H. Garrett—779

Faraday effect (see **Magneto-optical effects**)

Ferromagnetism (see **Magnetic properties**)

Field currents (see **Discharge of electricity in high vacua**)

Flames
Luminosity with Na vapor, T. W. Bonner—105

Galvanomagnetic effects
Radial induced electromotive force, C. A. Beck—607

Gamma-rays (see also **Radioactivity**)
Comparison of effects produced by x-rays and γ-rays, G. Failla—1033(A)
Of Ga II and In II, J. S. Campbell—1040(A)

Gamma-rays (see also **Radioactivity**) (continued)
Induced temporary radioactivity, G. L. Locher—884(L)
γ-radiation and nuclear structure, P. G. Kruger—318(L)
Wall effects in ionization electroscopes, E. J. Workman—1055(A)

Gases
Accommodation coefficient of H_2, K. B. Blodgett, I. Langmuir—78
Accommodation coefficient of monatomic gases, C. Zener, 335, 1016(L); W. C. Michels—472(L)
Disappearance of H_2 in the presence of K or Li ion sources, C. H. Kunsman, R. A. Nelson—128(A); 936
Equation of state of a nonideal Einstein-Bose or Fermi-Dirac gas, G. E. Uhlenbeck, L. Gropper—1029(A)
Graphical presentation of compressibility data, W. E. Deming, L. E. Shupe—1028(A)
Mean free paths, J. A. Eldridge—1050(A)
Physical properties of compressed gases, hydrogen, W. E. Deming, L. E. Shupe—848; 1055(A)
Transport phenomena in Einstein-Bose and Fermi-Dirac gases, E. A. Uehling, G. E. Uhlenbeck—1029(A)

Gravitation
Relationship to electromagnetism, W. A. Tripp—1028(A)

Hall effect
With audiofrequency currents, L. A. Wood—128(A)
Dependence on intensity of magnetization, E. M. Pugh, T. W. Lippert—1051(A)
In tellurium, P. I. Wold—128(A)

Heat of dissociation (see **Dissociation**)

High pressure phenomena
Apparatus for optical studies, T. C. Poulter—860
Lens effect of pressure windows, T. C. Poulter, C. Benz—872
Permeability of glass and fused quartz to ether, alcohol, and water, T. C. Poulter, R. O. Wilson—877

High voltage tubes and machines
Effect of the target on breakdown, W. H. Bennett—416; 1043(A)

Hydrodynamics
Characteristics of symmetrical hydrofoils, R. C. Darnell—1027(A)
Flow of liquids through porous materials, R. D. Wyckoff, H. G. Botset, M. Muskat—1027(A)

Hyperfine structure
Of λ3067 in Bi arc, R. F. Bacher, J. Wulff—123(A)
Isotope displacements in Pb, J. L. Rose, L. P. Granath—467(L); 760
Nuclear moment of Be, A. E. Parker—1014(L)
Paschen-Back effect, polarization of *D* lines, L. Larrick—1041(A)
And the polarization of Hg resonance radiation, A. C. G. Mitchell—964
Test of theory, R. F. Bacher, J. S. Campbell—1040(A)
Of V I, H. E. White—1041(A)

Indetermination principles (see **Quantum mechanics, general**)

Intensities in spectra (see also **Spectra,** etc.)
Of infrared absorption bands, L. A. Matheson—813
Of intercombination lines, H. C. Wolfe—1037(A)
Ionization and excitation by collisions of second kind, K. B. Thomson, O. S. Duffendack—1042(A)
Multiplet transitions in complex spectra, C. W. Ufford—974
Quantitative spectrographic analysis, O. S. Duffendack, R. A. Wolfe—1038(A)
Theory of complex spectra, M. H. Johnson, Jr.—133(A)

Ionization by impact (see also **Ionization potentials**)
And dissociation of benzene, E. G. Linder—1045(A)
Of Hg by K^+ ions, C. Frische—1050(A)

Ionization by radiation (see **Photoionization**)

Ionization potentials
Of molecular H_2, W. Bleakney—496
Of radon, H. Yagoda—316(L)

Ions, high speed
Loss of energy by fast electric particles, E. J. Williams—881(L)
Production without the use of high voltages, E. O. Lawrence, M. S. Livingston—19

Ions in gases
Motion of K^+ ions in Hg vapor, C. Frische—1050(A)
Number of Langevin ions in the free atmosphere, G. R. Wait, O. W. Torreson—1046(A)
Wall effects in ionization electroscopes, E. J. Workman—1055(A)

Ions, mobility (see also **Ions in gases**)

Absolute values in pure gases, N. E. Bradbury—508

Mobility of Cs atoms adsorbed on W, I. Langmuir, J. B. Taylor—463(L)

Mobility in gaseous mixtures and aging in pure gases, N. E. Bradbury—524

Photoelectric currents in gases between parallel plates, N. E. Bradbury—980

Isotopes

Of Cu, E. R. Bishop—16

Displacements in the hyperfine structure of Pb, J. L. Rose, L. P. Granath—467(L); 760

Of Ge, C. V. Shapiro, R. C. Gibbs, A. W. Laubengayer—354

Of H^2, H. C. Urey, F. G. Brickwedde, G. M. Murphy—1; 464(L)

Of H as studied with a mass-spectrograph, W. Bleakney—130(A)

Relative abundance of isotopes in natural H, C. A. Bradley, Jr., H. C. Urey—889

Technique for the separation of the isotopes of H, R. M. Langer—1047(A)

Kerr effect (see **Electro-optical effects**)

Kinetic theory of gases (see **Gases**)

Light waves

Aberration of the second order, N. Gallishohat—1028(A)

Liquids (see also **Hydrodynamics**)

Dispersion of small liquid systems, N. Rashevsky 132(A)

Ionization of organic acids, H. M. Smallwood—128(A)

Luminescence

Of glass, fluorite and quartz, T. Lyman—122 (A); 578

Magnetic properties

Contribution of free electrons to ferromagnetism, C. G. Montgomery—1053(A)

Discontinuities produced by mechanical deformation, D. G. C. Luck—1053(A)

Of large artificial graphite crystals, A. Goetz, A. Faessler—1053(A)

Of magnetite crystals at low temperature, Ching Hsien Li—1002

Paramagnetic susceptibilities in crystals, O. M. Jordahl, W. G. Penney, R. Schlapp—637(L)

Statistical calculation, O. Halpern—134(A)

Temperature changes accompanying magnetization, A. Townsend—120(A)

Magneto-optical effects

Phenomena underlying the magneto-optic method of analysis, F. Allison, J. H. Christensen, G. V. Waldo—1052(A)

Rotation by condenser discharge, F. G. Slack, W. M. Breazeale—1052(A)

Time lag in the Faraday effect, F. Allison, J. L. Condon—1021(L)

Transformation products of K detected, F. Allison, R. Goslin—1015(L)

Magnetostriction

Joule magnetostrictive effect in Co-Fe, S. R. Williams—120(A)

Mass-spectrographs (see also **Methods and instruments**)

For low pressure measurements, W. Bleakney—496

A new type, W. R. Smythe, J. Mattauch—429

Positive ions of mass 220, L. L. Barnes, R. C. Gibbs—318(L)

Study of ionization and dissociation of benzene by electron impact, E. G. Linder—1045(A)

Mechanics (see **Dynamics**)

Mechanics, quantum—atomic structure and spectra

Atomic energies for configurations involving almost closed shells, G. H. Shortley—1030(A)

Intensities of multiplet transitions in complex spectra, C. W. Ufford—974

Lower limit for the ground state of He atom, D. H. Weinstein—797

Pressure shift and broadening, H. Margenau—387; 1036(A)

Spin-orbit interaction, M. H. Johnson, Jr.—127 (A)

Theory of complex spectra, M. H. Johnson, Jr.—133(A), G. H. Shortley—185

Wave functions, analytic, J. C. Slater—126(A)

Wave functions for many electron atoms, L. A. Young—127(A)

X-ray levels by Fermi-Dirac theory, R. D. Richtmyer—1057(A)

Mechanics, quantum—general

Accommodation coefficient, C. Zener—335; 1016 (L); W. C. Michels—472(L)

Collision phenomena, N. Rosen, C. Zener—502; 1036(A)

Comparison of results of Sugiura and Sommerfeld on the production of x-rays, L. P. Smith—885 (L)

Dirac electron in simple fields, M. S. Plesset——1030(A)

Mechanics, quantum—general (continued)

Exchange of translational and vibrational energy, O. K. Rice—126(A)

Formal macroscopic approach to quantum phenomena, W. Bender—1056(A)

Gamow's treatment of radioactive disintegration, G. Breit—127(A)

Reflection of atoms from crystals, C. Zener—126 (A); 178

Relativity and the uncertainty principle, N. Rosen, M. S. Vallarta—127(A); 569

Scattering of slow electrons, E. Feenberg—40

Torsion oscillator-rotator, H. H. Nielsen—445

Transmission and reflection of wave packets by potential barriers, L. A. MacColl—621

Mechanics, quantum—molecular structure and spectra

Energy level formula of a rotating vibrator, J. L. Dunham—126(A)

Equivalent chemical bonds formed by *s*, *p*, and *d* eigenfunctions, R. Hultgren—891

Of lithium hydride, E. Hutchisson, M. Muskat—340

Mechanics, statistical

Assemblies containing crystals, T. E. Sterne—1030(A)

Mixed crystals, T. E. Sterne—133(A)

Quantum correction for thermodynamic equilibrium, E. Wigner—749

Transport phenomena in Einstein-Bose and Fermi-Dirac gases, E. A. Uehling, G. E. Uhlenbeck—1029(A)

Metastable atoms and molecules

Afterglow of Hg resonance radiation, E. W. Samson—940

Electron emission by metastable atoms, E. W. Pike—314(L)

Size of the Hg atom, H. W. Webb, H. A. Messenger—466(L)

Meteorology

Current-system of the upper atmosphere, A. G. McNish—1046(A)

Ionization of the upper atmosphere, E. O. Hulburt—129(A)

Lightning discharges and the electrical field of thunderstorms, J. C. Jensen—1013(L)

Ultraviolet transmission of the atmosphere, R. S. Rockwood, R. A. Sawyer—1047(A)

Visibility as function of dust and humidity, M. T. Riley—1047(A)

Methods and instruments

Calculation of probable errors, R. T. Birge—207

Computing lattice energy constants, R. H. Canfield—1034(A)

Principles of a new portable electrometer, R. Gunn—307; 1031(A)

Graphical presentation of compressibility data, W. E. Deming, L. E. Shupe—1028(A)

He filled G.M. tube counters, J. A. Bearden, C. L. Haines—1048(A)

Large Geiger counters, W. F. G. Swann, J. C. Street—1049(A)

Least square adjustment of observations, L. D. Weld—713

Lens effect of pressure windows, T. C. Poulter, C. Benz—872

Line reversal temperature measurements, A. E. Hershey, R. F. Paton—1053(A)

Mass-spectrograph, K. T. Bainbridge—130(A)

Measurements of small currents using pliotron tubes, L. R. Hafstad—1044(A)

Measurement of vacuum conditions in finished (sealed-off) vacuum tubes, H. J. Miller—1043(A)

Measurements on height of drop of Hg, M. Kernaghan—1020(L)

Measuring power factor of a condenser, A. W. Smith—1056(A)

Method of determining the coordinates of point-groups, D. McLachlan—1030(A)

Nature of errors of gratings, R. W. Wood—1038(A)

New low noise vacuum tube, G. F. Metcalf, T. M. Dickinson—134(A)

New mass-spectrometer, W. R. Smythe, J. Mattauch—429

Obtaining the derivative function from data of observation, G. Rutledge—262

Optical studies at high pressure, T. C. Poulter—860

Photographing tracks of corpuscular rays. T. H. Johnson, Willis Fleischer, Jr., J. C. Street—1048(A)

Portable cosmic-ray counter, J. C. Street, T. H. Johnson—1048(A)

Probe measurements on arcs, R. C. Mason—1045 (A)

Production of high speed ions, E. O. Lawrence, M. S. Livingston—19

Production of large artificial graphite crystals, A. Goetz, A. Faessler—1053(A)

Quantitative spectrographic analysis, O. S. Duffendack, R. A. Wolfe—1038(A)

Recording spectrometer, range to 30μ, L. R. Weber, H. M. Randall—835

Sensitive detector of surface films, K. B. Blodgett, I. Langmuir—78

Methods and instruments (continued)
Sensitizing photographic plates to the ultraviolet, A. J. Allen, R. Franklin—1038(A)
Shielding from a potential gradient by means of a charged dielectric, C. M. Slack—132(A)
Short-time d.c. conductivity of insulating liquids, G. W. Gardiner, Jr.—1054(A)
Spectrograph for the extreme ultraviolet, K. T. Compton, J. C. Boyce—1038(A)
Technique for the separation of the isotopes of H, R. M. Langer—1057(A)
Ultra-short electromagnetic waves, G. Potapenko—988
Use of a densitometer on x-ray lines, W. Duane—132(A)
Vapor pressures from data of the gas current method, H. T. Gerry, L. J. Gillespie—269
Wide angle magnetic spectrometer, C. D. Bock—130(A)

Mobility of ions (see also **Ions, mobility**)
Number of Langevin ions in the free atmosphere, G. R. Wait, O. W. Torreson—1046(A)

Molecular beams (see **Atomic and molecular beams**)

Molecular structure and constants (see also **Spectra molecular; Raman spectra**)
Electronic structures of polyatomic molecules, R. S. Mulliken—55

Multiplets (see also **Spectra, atomic**)
Multiplet splitting, H. C. Wolfe—1037(A)
Of P^{31} nucleus, G. Herzberg—313(L)

Nuclear spin (see also **Hyperfine structure**)
Moment of Na, N. P. Heydenburg, L. Larrick, A. Ellett—1041(A)

Nucleus
Moment of Be, A. E. Parker—1014(L)
γ-radiation and nuclear structure, P. G. Kruger—318(L)

Neutrons
Hypotheses and cosmic-rays, R. A. Millikan, C. D. Anderson—325

Optical constants and properties
Lorentz double refraction, F. Seitz—1036(A)

Optical instruments (see **Methods and instruments**)

Oscillators (see also **Electrical circuits**)
Generation of the dwarf waves, G. Potapenko—988
Magnetostatic vacuum tube, W. Dehlinger—120(A)
Piezoelectric resonator, K. S. Van Dyke—1026(A)

Paschen-Back effect
Hyperfine structure and polarization of *D* lines, L. Larrick—1041(A)

Photoelectric effect and properties
Compound photoelectric effect of x-rays in light elements, G. L. Locher—484
Depth of origin of photoelectrons, H. E. Ives, H. B. Briggs—121(A), 802
Emission from different metals, H. C. Rentschler, D. E. Henry, K. O. Smith—1045(A)
Verification of Fowler's theory, G. B. Welch—470(L)

Photography
Response of photographic emulsions to α-rays, T. R. Wilkins—130(A)
Sensitizing photographic plates to the ultraviolet, A. J. Allen, R. Franklin—1038(A)

Photoionization
Dependence on pressure and temperature, J. W. Broxon—1022(L)

Plasmoidal discharges (see **Discharge of electricity in gases**)

Piezoelectric effect
Converse piezoelectric effect in mixed crystals, S. Bloomenthal—121(A)

Polarization, electrical (see also **Dielectric constants**)
And electronic structures of polyatomic molecules, R. S. Mulliken—55

Polarization of radiation
Of *D* lines and nuclear moment of the atom, N. P. Heydenburg, L. Larrick, A. Ellett—1041(A)
Of Hg λ2537 and hyperfine structure, A. C. G. Mitchell—964

Potential barriers
Transmission and reflection of wave packets, L. A. MacColl—621

Potentials, critical (see **Ionization potentials**)

Proceedings of the American Physical Society
Cambridge Meeting, February 25-27, 1932—118
Washington Meeting, April 28-30, 1932—1024

Predissociation
Of the P_2 molecule, G. Herzberg—313(L)
In the spectrum of ICl, W. G. Brown, G. E. Gibson—529, 1040(A)
Theory of magnetic quenching of I fluorescence as predissociation, J. H. Van Vleck—544

Quenching of radiation
Of Hg resonance radiation by H_2, CO, and N_2, J. S. Owens, O. S. Duffendack—1042(A)
Theory of magnetic quenching of I fluorescence, J. H. Van Vleck—544

Radiation
From metals bombarded by slow electrons, C. Boeckner—122(A); 1043(A)
From negative point discharges at low pressure, W. M. Cohn—122(A)

Radioactivity
Calculation of radioactive disintegration constant, G. Breit—127(A)
Disintegration constant of U, A. F. Kovarik, N. I. Adams, Jr.—718
Induced temporary radioactivity, N. S. Grace, 634(L) G. L. Locher—884(L)
γ-radiation and nuclear structure, P. G. Kruger—318(L)
Radon content of soil gas, H. G. Botset—1027(A)
Response of photographic emulsions to α-rays, T. R. Wilkins—130(A)
Theory of the atom of energy, E. K. Plyler—1029(A)
Transformation product of K, F. Allison, R. Goslin—1015(L)

Raies Ultimes
Of element 87, H. Yagoda—1017(L)

Raman spectra
Of nineteen octanols, G. Collins—829
Smekal-Raman spectra of $SiHCl_3$, $CHFCl_2$ and CF_2Cl_2, C. A. Bradley, Jr.—908

Reaction rates
Exchange of translational and vibrational energy, O. K. Rice—126(A)

Rectifiers
Conductivity of silicon carbide, R. W. Sears, J. A. Becker—1055(A)
Copper-cuprous-oxide rectifier at high frequencies, W. P. Place—1054(A)
Photoelectric effect in a copper-oxide rectifier, L. O. Grondahl—635(L)

Relativity
Aberration of the second order, N. Gallishohat—1028(A)
Formal macroscopic approach to quantum phenomena, W. Bender—1056(A)

Resistance, electrical (see **Electrical conductivity and resistance**)

Resonance radiation
Afterglow of Hg radiation, temperature and N_2 pressure effects, E. W. Samson—940
And line broadening, C. Kenty—633(L)

Scattering of electrons (see also **Collision diameter; Electrons in gases; Electron diffraction**)
Angular distribution of electrons scattered in Hg vapor, J. T. Tate, R. R. Palmer—731; 1042(A)
In A, A. L. Hughes, J. H. McMillen—469(L)
Slow electrons, E. Feenberg—40

Scattering of light (see also **Raman spectra**)
By the atmosphere for λ3200, R. S. Rockwood, R. A. Sawyer—1047(A)

Shot effect
Reduction by electron space charge, E. W. Thatcher—114(L)

Sound (see **Acoustics**)

Spark discharge
Dark current time, L. B. Snoddy—409

Specific heat
And magnetic properties of magnetite, Ching Hsien Li—1002

Spectra, absorption (see also **Absorption of light**)
Effect of temperature on bands of benzene, A. H. Croup—345
Of Ge S, C. V. Shapiro, R. C. Gibbs, A. W. Laubengayer—354
Of ICl, O. Darbyshire—366
Intensity of infrared bands, Lorne A. Matheson—813
Of O_2 for short wave-lengths, R. Ladenburg, C. C. Van Voorhis, J. C. Boyce—1018(L)
Of O_2 in ultraviolet, R. Ladenburg, G. Wolfsohn—123(A)
Of SO_2, T. C. Chow—1039(A)
Ultraviolet of formaldehyde, G. H. Dieke, G. B. Kistiakowsky—1039(A)
Of water vapor beyond 10μ, L. R. Weber, H. M. Randall—835

Spectra, atomic
Alkali inverted doublets, H. E. White—316(L)
G-value of the normal state of Bi I, R. F. Bacher, J. Wulff—123(A)
Of hydrogen (H^3), H. C. Urey, F. G. Brickwedde, G. M. Murphy—1; 464(L)
Infrared of the noble gases, W. F. Meggers, C. J. Humphreys—1040(A)
Isoelectronic sequence in Sb VI and Te VII, G. K. Schoepfle—1040(A)

Spectra, atomic (continued)
Mean lives of Hg lines λ2537 and λ1849, P. H. Garrett—779
Perturbed series, A. G. Shenstone—123(A)
Pressure shift and broadening, H. Margenau—387; 1036(A)
Term values of Se I, R. C. Gibbs, J. E. Ruedy—204
Theory of complex spectra, M. H. Johnson, Jr.—133(A); G. H. Shortley—185
Ultimate lines of element 87, H. Yagoda—1017(L)

Spectra, general
Vibrational levels in ammonia-like molecules, P. M. Morse, N. Rosen—1039(A)

Spectra, molecular
Of N_2, F. W. Loomis, R. E. Nusbaum—380
Near infrared of ammonia, J. D. Hardy—1039(A)
Of P_2, G. Herzberg—313(L)
Predissociation in ICl, W. G. Brown, G. E. Gibson—529; 1040(A)
Of SO_2, T. C. Chow—1039(A)
Theory of magnetic quenching of iodine fluorescence and of Λ-doubling in $^3\Pi_0$ states, J. H. Van Vleck—544
Third positive group of CO bands, G. H. Dieke, J. W. Mauchly—123(A)
Ultraviolet bands of SiO, P. G. Saper—465(L)

Spectra, x-rays (see **X-ray, spectra**)

Spectroscopy, technique
Infrared of the noble gases, W. F. Meggers, C. J. Humphreys—1040(A)
Measuring x-ray intensities by means of an electronic photo-cell, P. R. Gleason—134(A)
Nature of errors of gratings, R. W. Wood—1038(A)
Quantitative spectrographic analysis, O. S. Duffendack, R. A. Wolfe—1038(A)
Spectrograph for the extreme ultraviolet, K. T. Compton, J. C. Boyce—1038(A)

Statistical mechanics (see **Mechanics, statistical**)

Sublimation
Heat of carbon, W. E. Vaughan, G. B. Kistiakowsky—457

Surface tension (see also **Capillary action**)
Height of a drop of Hg, M. Kernaghan—1020(L)

Terrestrial magnetism
Current-system of the upper atmosphere, A. G. McNish—1046(A)

Thermal conductivity
Thermal diffusivity of Ni, R. H. Frazier—592

Thermal diffusivity (see **Thermal conductivity**)

Thermal expansion
Of Ni steels, P. Hidnert, H. S. Krider—131(A)

Thermionic emission of electrons, emitting surfaces
Deviation of anode currents from the three-halves power law, A. Gehrts—434
Evaporation and migration of Th on W, W. H. Brattain—1044(A)
Limited by electron space charge, E. W. Thatcher—1045(A)

Thermionic emission of positive ions
From heated metals, L. L. Barnes—1044(A)

Thermodynamics
Quantum correction for thermodynamic equilibrium, E. Wigner—749

Uncertainty principle (see **Quantum mechanics, general**)

Units
Electromagnetic equations and systems of units, L. Page—1050(A)
General theory of electric and magnetic units, V. Karapetoff—1051(A)
Magnetic units, A. E. Kennelly—1050(A)
Superfluous systems of electromagnetic units, G. A. Campbell—1051(A)

Vacuum tubes
Deviation of anode currents from the three-halves power law, A. Gehrts—434
Measurement of vacuum conditions in finished (sealed-off) vacuum tubes, H. J. Miller—1043(A)
New low noise vacuum tube, G. F. Metcalf, T. M. Dickinson—134(A)

Valence
Bonds formed by s, p, and d eigenfunctions, R. Hultgren—891
sp^3 valency, J. H. Van Vleck—1037(A)

Vaporization (see **Evaporation**)

Vapor pressure
Of I_2, gas current method, H. T. Gerry, L. J. Gillespie—269

Viscosity
Of normal and isopentane, variation with pressure, R. K. Day—281
Particle shape in colloid solutions, L. Onsager—1028(A)

Visibility
As function of dust and humidity, M. T. Riley—1047(A)

Work function (see **Electrons, thermionic; Photoelectric effect**)

X-rays, absorption

Action of x-rays on matter, N. S. Grace—634(L) G. L. Locher—884(L)
Comparison of effects produced by x-rays and γ-rays, G. Failla—1033(A)
Compound photoelectric effect of x-rays in light elements, G. L. Locher—484
L-absorption limits of Hg, H. L. Hull—132(A), 676
Reduction by x-rays of aqueous solutions and influence of organic substances, H. Fricke, M. Washburn—1033(A)

X-rays, diffraction scattering, reflection and refraction

Breadth of Compton line from crystalline graphite, J. W. M. DuMond, H. A. Kirkpatrick, L. Alden—165
Reflecting and resolving power of calcite, S. K. Allison—1032(A)
Refraction by calcite crystals, J. A. Bearden, C. H. Shaw—1031(A)
Refractive index of liquids, S. W. Smith—156
Scattering curves for NH_4 and I in NH_4I at various temperatures, G. A. Morton—1031(A)
Temperature and the Compton effect, G. E. M. Jauncey, G. G. Harvey—329

X-rays, emission

Comparison of results of Sugiura and Sommerfeld on the production of x-rays, L. P. Smith—885 (L)
Energy levels by Fermi-Dirac theory, R. D. Richtmyer—1057(A)
Production of satellites by fluorescent absorption, F. R. Hirsch, Jr., F. K. Richtmyer—1033(A)
Satellites near the $K\beta_1$ line, O. R. Ford, C. B. Post—1033(A)
Shape of an x-ray line, A. Hoyt—477; 1031(A)

X-rays, spectra and spectroscopy, wave-length measurements

Absolute value of wave-lengths, E. Bäcklin—112 (L); J. A. Bearden—471(L)
Forbidden lines in the *L* series, S. Kaufman, F. K. Richtmyer—1032(A); S. Kaufman—116(L)
Grating constants of crystals, Yuching Tu—662
Precision wave-length measurements, J. A. Bearden—133(A)
Satellites accompanying the x-ray diagram line $K\beta_1$, F. R. Hirsh—151
Satellites of the x-ray lines $L\alpha_1$ and $L\beta_2$, F. K. Richtmyer, S. Kaufman—132(A)
Shapes and widths of *L*-absorption limits of Hg, H. L. Hull—132(A); 676
Wave-lengths with the double spectrometer, J. H. Williams—636(L); 791; 1032(A)

X-rays, tubes, apparatus

Measuring x-ray intensities by means of an electronic photo-cell, P. R. Gleason—134(A)
Precision wave-length measurements, J. A. Bearden—133(A)
Shielding by means of a charged dielectric, C. M. Slack—132(A)
Use of densitometer on x-ray lines, W. Duane—132(A)

Zeeman effect

Of Pb III, J. B. Green, R. A. Loring—883(L)
